

## APPRISE SERVICES

### 6. Supply chain, transport and warehouse system reviews

Apprise Consulting is able to assist clients with their choice of logistics and supply chain related software.

We are able to advise on supply chain software such as ERP solutions, warehouse management systems, transport optimisation systems and various products which can assist productivity such as voice activated picking systems, RFID, SAAS and mobile solutions.

We are independent of any manufacturer or supplier of hardware or software unless we have been involved in the actual development and launch of the product. Even then we will provide our clients with suitable alternatives if requested.

Our aim is to provide our clients with an unbiased choice which meets their expectations with a supplier they can work with and shares the same values.

Before we begin looking for solutions however we will ensure that the underlying processes are in place and any unnecessary steps have been removed.

Introducing software to a flawed system will only exacerbate the problem.

Once the processes have been addressed we can assist you with preparing an ITT ensuring that your requirements are fully met, or can be met at a later date and providing the quoting companies with sufficient data to enable them to produce an accurate quotation.

We can advise you on which software companies can provide the right product, within the right timescale and within budget. We will arrange introductions, visits to operational sites and assist with the integration and implementation if required.
